

# FLYING EAGLE

FINE FESCUES

Jonathan Green Flying Eagle grass seeds are advanced shade tolerant varieties of fine fescues. Basically bunch-type grasses that have been developed in our breeding program to have insect and disease resistance, while blending very well with other elite grass varieties, "Soaring above the ordinary."

## SEEDING RATES:

4 – 5 lbs. per 1,000 sq. ft.  
 500,000 seeds per lb.

*Flying Eagle Fine Fescues have great drought tolerance. This photo was taken in August after 45 days without irrigation.*

*Flying Eagle Fine Fescues blend well with other grasses.*

## FINE FESCUES

**Chewing Fescue:**  
*Festuca rubra commutata*

**Creeping Red Fescue:**  
*Festuca rubra*

**Hard Fescue:**  
*Festuca longifolia*

- Highly advanced shade tolerance, best adapted to shady locations that are damp
- Will do well in sunny areas, with adequate moisture
- Mixes very well with other grasses
- Low maintenance requirements for fertilization, water and mowing
- Performs well in poor, infertile soils of lower pH
- Endophyte enhanced to reduce insect damage
- Approximately 10 to 14 days to germinate
