

SOLAR

TEXAS "HYBRID" BLUEGRASS (NAI-14-128)

Solar Texas "Hybrid" Bluegrass is the second *poa arachnifera* x *poa pratensis* cross to come from the Cascade breeding program. Solar Texas Hybrid Bluegrass is stable maintaining a minimum of 25% *poa arachnifera* in the final cross and exhibits very few cottony seed heads, which ensures that grass seed growers will produce it. Solar will be available after the seed harvest in 2021. Solar has an incredibly "bright" dark green color and will mix very well with our previously released Blue Gem Texas Bluegrass Hybrid to create a very uniform and attractive turfgrass stand. Solar can also be added to a Black Beauty Tall Fescue Mixture to grow an incredibly drought tolerant and disease resistant sod or lawn in the transition zone or anywhere superior drought tolerance and disease resistance is required, but a great looking lawn is desired.

SEEDING RATES:

Overseeding:

1 – 2 lbs. per 1,000 sq. ft.

Bare Soil:

2 – 3 lbs. per 1,000 sq. ft.

- Extreme drought tolerance
- Survives in heat up to 104°F
- Beautiful dark green color
- Plant straight or with Black Beauty Tall Fescue
- Superior disease resistance
- Grow sod without netting

SOLAR has a beautiful bright dark-green color.

ABOVE: SOLAR TEXAS HYBRID BLUEGRASS produces seed without the cottony seed head.

RIGHT: SOLAR is a consistent seed yielder in this nursery in Hermiston Oregon.
